

AI Product Advertisement Generator

Objective:

Create a system using Stable Diffusion that generates multiple professional advertisements for the same product under different environments, lighting, camera angles, and styles.

Example product:

You can choose:

1. Car
2. Smartphone
3. Shoes
4. Watch
5. Laptop
6. Beverage bottle
7. Cosmetic product etc

For example, using my Kia Seltos reference image:

Generate advertisements for the same car in a mountain landscape, university campus, city street, beach, and desert while maintaining the visual identity of the vehicle.

Project workflow:

Reference Product Image

Parameters to experiment with:

Experiment	Parameter	Values
1	Prompt	Basic vs. Detailed
2	Negative Prompt	None vs. Detailed
3	Seed	42, 101, 999
4	CFG Scale	3, 7, 12
5	Inference Steps	10, 20, 30, 50
6	Image-to-Image Strength	0.2, 0.45, 0.7
7	Environment	Campus, Mountain, City, Beach
8	Lighting	Daylight, Golden Hour, Night
9	Camera	Wide-angle, Close-up, Low-angle
10	Style	Photorealistic, Cinematic, Luxury

Final deliverables:

Python/Colab notebook containing:

1. Original reference image
2. Prompts used
3. Negative prompts
4. Parameter values
5. Generated images
6. Comparison table
7. Best prompt + best parameter combination
