

VIDEO GENERATION PROMPT — CLIP 1 (0–5 seconds)

Create a cinematic 5-second photorealistic futuristic university scene set at **Marwadi University, India, in the year 2050**.

CHARACTER: A 20-year-old Indian university student, male, medium build, short black hair, wearing a clean futuristic dark-blue university jacket with a subtle MU emblem, black trousers and a backpack. Keep the character's face, hairstyle, clothing and body proportions consistent throughout the entire clip.

ENVIRONMENT: A recognizable futuristic university entrance inspired by a modern Indian university campus. Large architectural entrance, elegant glass-and-metal buildings, landscaped pathways, autonomous electric shuttle vehicles, small delivery drones, holographic information displays and students walking around. The campus should feel technologically advanced but realistic and believable, not like science fiction fantasy.

ACTION: The student walks confidently toward the university entrance while looking around in amazement. A transparent holographic campus sign activates beside him and displays: "MARWADI UNIVERSITY — 2050".

CAMERA: Start with a wide establishing shot of the futuristic campus entrance. Perform a smooth cinematic forward dolly toward the student as he walks toward the entrance. Camera remains at approximately eye level. No sudden camera movements.

LIGHTING: Golden-hour morning sunlight, realistic shadows, soft reflections on glass buildings, subtle atmospheric depth.

VISUAL STYLE: Photorealistic cinematic film, premium university advertisement, realistic human proportions, natural skin texture, realistic architecture, physically accurate lighting, shallow depth of field, subtle lens flare, high detail.

STORY PURPOSE: Establish the futuristic setting and introduce the main character. The final frame should naturally lead into the student entering the campus.

CONTINUITY: Do not change the student's appearance, clothes, backpack or hairstyle. Maintain consistent architecture and lighting.

NEGATIVE PROMPT: cartoon, anime, distorted face, extra fingers, extra limbs, duplicated people, warped buildings, unrealistic physics, excessive neon, flying cars everywhere, shaky camera, fast zoom, camera distortion, text artifacts, misspelled university name, low resolution, blurry subject.

VIDEO GENERATION PROMPT — CLIP 2 (5–10 seconds)

Continue the exact same cinematic story from Clip 1.

CHARACTER CONSISTENCY: The same 20-year-old Indian male student from Clip 1, identical face, short black hair, dark-blue futuristic university jacket with subtle MU emblem, black trousers and backpack. Do not redesign or replace the character.

ENVIRONMENT: Interior of the futuristic Marwadi University campus in 2050. A spacious intelligent corridor connects modern classrooms and laboratories. Transparent interactive displays are embedded into the walls. Students interact naturally with AI systems. Small autonomous robots move quietly through the hallway. Architectural design combines realistic contemporary university architecture with advanced technology.

ACTION: The student walks through the corridor. As he approaches a classroom, the wall display automatically recognizes him and creates a subtle holographic interface showing: "AI & ROBOTICS LAB — CLASS STARTING". The student stops briefly and looks toward the classroom door as it opens automatically.

CAMERA: Begin behind and slightly to the side of the student, using a smooth tracking shot as he walks forward. Slowly move around to a three-quarter front angle as the classroom door opens. Keep the student centered in the frame.

TRANSITION: End with the camera moving toward the open classroom doorway, creating a natural visual transition into Clip 3.

LIGHTING: Clean futuristic indoor lighting mixed with soft daylight entering through large windows. Realistic reflections and shadows.

VISUAL STYLE: Photorealistic cinematic university commercial, realistic futuristic technology, natural human movement, premium production quality, subtle depth of field, physically accurate lighting.

STORY PURPOSE: Show how technology has become naturally integrated into everyday university life.

CONTINUITY: Same student, same clothes, same backpack, same visual style and color palette as Clip 1. The futuristic technology must look practical and believable.

NEGATIVE PROMPT: character redesign, different face, different clothes, cartoon, anime, exaggerated sci-fi, cyberpunk city, excessive neon, floating objects without purpose, distorted hands, extra fingers, duplicate students, warped architecture, shaky camera, sudden cuts, blurry face, unreadable text.

VIDEO GENERATION PROMPT — CLIP 3 (10–15 seconds)

Continue directly from Clip 2 with the same student entering the futuristic classroom at Marwadi University in 2050.

CHARACTER: Same 20-year-old Indian male student, identical face, hairstyle, dark-blue university jacket, black trousers and backpack. Maintain perfect visual continuity.

ENVIRONMENT: A futuristic but believable university classroom. Students sit at modern desks equipped with transparent interactive screens. At the front of the room is a realistic human-sized holographic AI professor. Behind the professor is a large transparent digital display showing a rotating 3D model of a robotic system.

ACTION: The student enters the classroom and looks toward the holographic professor. The AI professor turns toward the student and activates the 3D robotic model. The classroom lights subtly brighten as the technology activates. Other students naturally look toward the holographic professor.

CAMERA: Start from behind the student as he enters. Slowly crane upward and move forward over his shoulder, revealing the entire futuristic classroom and holographic professor. Finish on a cinematic wide shot showing the student, classroom and holographic professor together.

ENDING SHOT: Hold the final composition for approximately 1 second. The holographic display clearly communicates the idea of "LEARNING WITHOUT LIMITS". The final image should feel inspirational and suitable for a university advertisement.

LIGHTING: Soft daylight through large windows combined with subtle illumination from holographic displays. Realistic shadows and reflections.

VISUAL STYLE: High-end photorealistic cinematic advertisement, believable future technology, realistic Indian university environment, natural human expressions, realistic skin texture, cinematic depth of field, premium film production.

STORY PURPOSE: Deliver the final reveal: Marwadi University has transformed into an intelligent, technology-driven campus where AI and humans learn together.

CONTINUITY: Same student and same visual identity as Clips 1 and 2. Preserve realistic proportions, architecture and lighting.

NEGATIVE PROMPT: cartoon, anime, fantasy classroom, cyberpunk, excessive neon, distorted faces, extra limbs, extra fingers, duplicate characters, unrealistic hologram physics, floating students, warped desks, shaky camera, rapid zoom, text distortion, unreadable text, low resolution.
